Rainfall and Temperature Forecast for Feb-Mar-Apr (FMA) 2026

IOD is expected to be **neutral** for Feb-Mar-Apr (2026) as per Figure (a), with no significant temperature contrast between the Somalian coast (NW Indian Ocean) and the Sumatran coast (NE Indian Ocean). **SIOD** is in a **weak negative phase** and will tend towards neutral conditions. Over the Equatorial Pacific Ocean, the on-going **weak La Nina** is expected to become neutral in FMA-2026. Positive pressure anomalies are expected to develop over the central Indian Ocean, mainly in the subtropical region as shown in Figure (b).

Standardised Precipitation Index (SPI) Monitoring in Mauritius

Aim: To apply the SPI, as recommended by the World Meteorological Organisation, in Mauritius to monitor rainfall deficits during dry spell events.

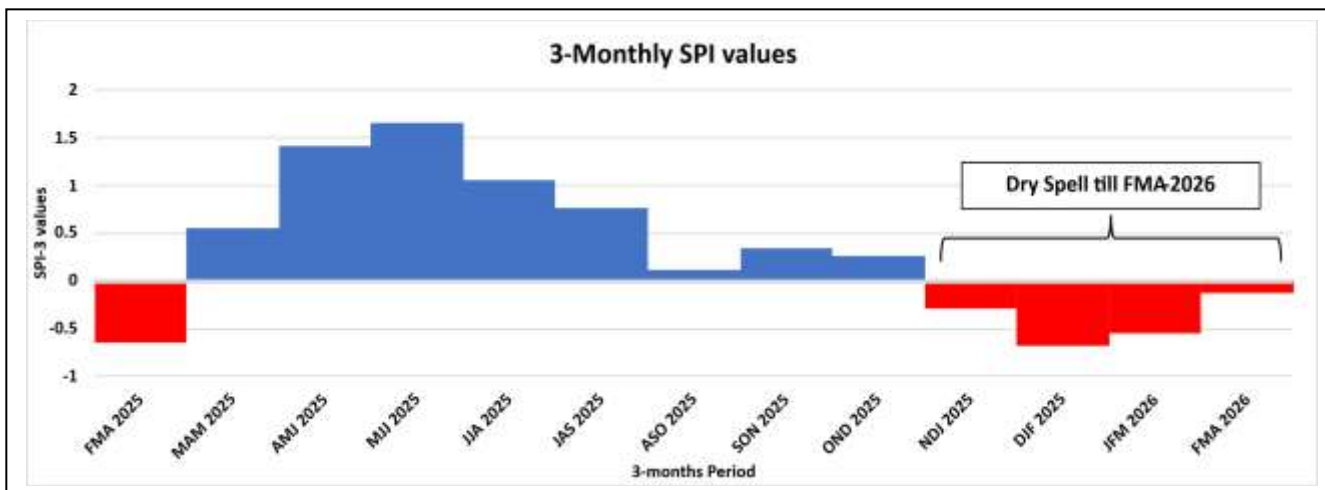

Current Status: A dry spell has started since January 2026 although **near normal** condition, with a negative tendency, was **observed** in NDJ-25 with an SPI-3 value of **-0.29** (Fig b).

SPI Forecast: Weakly dry condition is **expected to persist** in the coming months based on SPI values for DJF-25, JFM-26 and FMA-26 which are as follows: **-0.68**, **-0.55** and **-0.13** respectively.
